

How to present a film on Iraqiscope.org

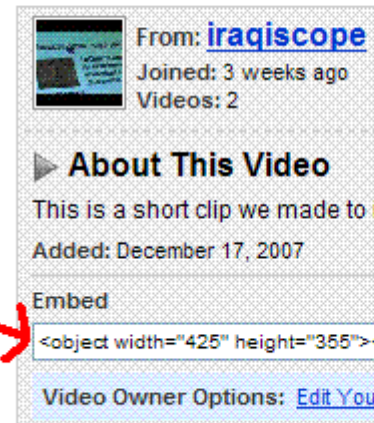

There are two ways to contribute films to the Iraqiscope, you can upload a film to **our server** or embed a film from **YouTube** or Yahoo. In both cases a registration is necessary to start with. The next step is to click “ add your own film” in the navigation bar. Now you have the possibility to give your film a title, some information text, select the year the film was produced and finally to add your film to our system.

If you have a film already on YouTube, you can simply embed your own film into your Iraqiscope content management system. YouTube offers this possibility and you can find the source code to embed your film, next to your player in YouTube.

1. Copy YouTube embed code

Iraqiscope.org Introduction

2. After you have registered, select the YouTube option

شروط الاستخدام . terms of use

أضف فلمك . add your own film

log out

Select to embed a film from YouTube

genre

home made clips
feature films
short films
documentaries
cooking shows

author

Eyad Hamam

year of production

2007

Upload Videofile

During you are uploading a film do not close your browser window before the upload is finished. Otherwise the upload will be interrupted and you have to do it again. Once your film is completely uploaded, the film will be converted, checked by our system admin and finally put online. The process might take a couple of hours.

Films and Clips uploaded to our server will be resized and converted. You achieve the best quality if you upload a flash film (*.flv) with 468 x 374 pixel. Other files types are also encoded such as .avi and .mov. We experienced problems with Real Media Files (.rm). Please do not upload films in this format.
